Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Previously Presented) A composition for cord coating comprising a latex of a first rubber, a phenol resin, and a water-soluble condensation product of resorcinol-formaldehyde so that a ratio of the first rubber to a solid content of the composition, a ratio of the phenol resin thereto, and the ratio of the water soluble condensation product thereto are 30 to 95 wt.%, 1 to 30 wt.%, and 2 to 15 wt.%, respectively, wherein
the first rubber is a nitrile group-containing highly saturated polymer rubber having an iodine value of 120 or less, and
the water-soluble condensation product is a novolac-type condensation product.

2. (Original) The composition for cord coating according to claim 1, comprising a latex of a second rubber different from the first rubber so that a ratio of the second rubber to a solid content of the composition is 60 wt.% or less.

3. (Previously Presented) The composition for cord coating according to claim 2, wherein the latex of a second rubber is at least one latex selected from the group consisting of a butadiene-styrene copolymer latex, a dicarboxylated butadiene-styrene copolymer latex, a vinylpyridine-butadiene-styrene terpolymer latex, an isoprene rubber latex, a chloroprene rubber latex, a chlorosulfonated polyethylene latex, and an acrylonitrile-butadiene copolymer latex having an iodine value of above 120.

4. (Previously Presented) A reinforcing cord for rubber reinforcement comprising a reinforcing fiber and a coating layer formed so that the reinforcing fiber is coated, wherein

the coating layer is formed of a composition for cord coating,

Application No. 10/590926

Responsive to the office action dated August 4, 2009

the composition for cord coating includes a latex of a first rubber, a phenol resin, and a water-soluble condensation product of resorcinol-formaldehyde so that a ratio of the first rubber to a solid content of the composition, the ratio of the phenol resin thereto, and the ratio of the water-soluble condensation product are 30 to 95 wt.%, 1 to 30 wt.%, and 2 to 15 wt.%, respectively,

the first rubber is a nitrile group-containing highly saturated polymer rubber having an iodine value of 120 or less, and

the water-soluble condensation product is a novolac-type condensation product.

5. (Original) The reinforcing cord for rubber reinforcement according to claim 4, wherein the composition for cord coating comprises a latex of a second rubber different from the first rubber so that a ratio of the second rubber to a solid content of the composition is 60 wt.% or less.

6. (Previously Presented) The reinforcing cord for rubber reinforcement according to claim 5, wherein the latex of a second rubber is at least one latex selected from the group consisting of a butadiene-styrene copolymer latex, a dicarboxylated butadiene-styrene copolymer latex, a vinylpyridine-butadiene-styrene terpolymer latex, an isoprene rubber latex, a chloroprene rubber latex, a chlorosulfonated polyethylene latex, and an acrylonitrile-butadiene copolymer latex having an iodine value of above 120.

7. (Original) The reinforcing cord for rubber reinforcement according to claim 4, wherein a weight of the coating layer is in a range of 5 to 40% of a weight of the reinforcing fiber.

8. (Original) The reinforcing cord for rubber reinforcement according to claim 4, wherein the reinforcing fiber is at least one fiber selected from the group consisting of a glass fiber, an aramid fiber and a carbon fiber.

9. (Original) The reinforcing cord for rubber reinforcement according to claim 4, wherein the coating layer is further coated with another coating layer.

Application No. 10/590926

Responsive to the office action dated August 4, 2009

10. (Original) A rubber product reinforced by the reinforcing cord for rubber reinforcement according to claim 4.

11. (New) The composition for cord coating according to claim 1, wherein the water-soluble condensation product of resorcinol-formaldehyde is highly polymerized.

12. (New) The reinforcing cord for rubber reinforcement according to claim 4, wherein the water-soluble condensation product of resorcinol-formaldehyde is highly polymerized.
